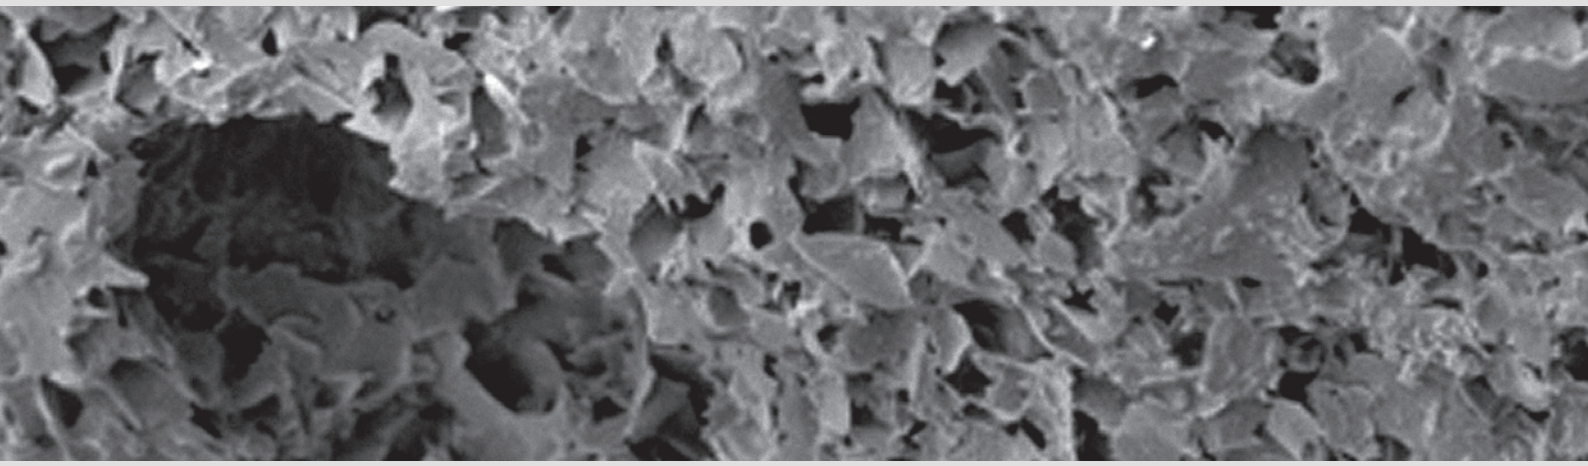
# KefaAkustik

## Sound-absorbing anti-condensation coating

**Problems with noise and dripping water? KefaAkustik offers the perfect combination of protection against unwanted condensation and noise pollution caused by metallic elements such as corrugated sheets, roofing and ventilation ducts. Buildings, goods and hearing remain protected for years – effective, environmentally friendly and ingeniously simple.**



Micropores in combination with “heavy“ components ensure sound absorbing and moisture-regulating properties

Guaranteed dry behind the ears

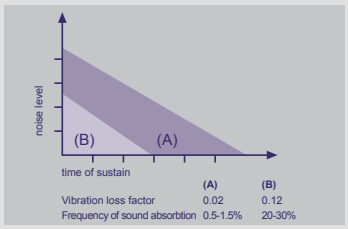
Interior finish in a sports hall

**Absorbs sound and prevents water drop formation**

The microporous structure of KefaAkustik provides dry, drip-free surfaces and protects against damage such as weathering, rust and mould. Besides this, mineral components effectively attenuate the natural frequency of the material, and thus the generation of noise, without adding too much weight to structures.

**Application:** KefaAkustik is available as a finished product in industrial and airless quality. The coating is suitable for galvanized steel sheets, aluminium, zinc-aluminium alloys, stainless steel and surfaces with or without corrosion prevention.

**Properties:** Noise reduction (anti-rumbling) and protection against condensation and consequential damages, insulating, emission-free, temperature resistant, fire-retardant



Noise reduction by KefaAkustik

Application with airless spray equipment

**Ingeniously simple – simply ingenious**

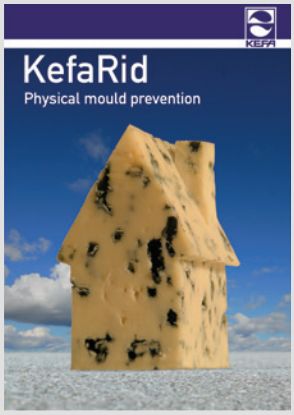
# Product overview

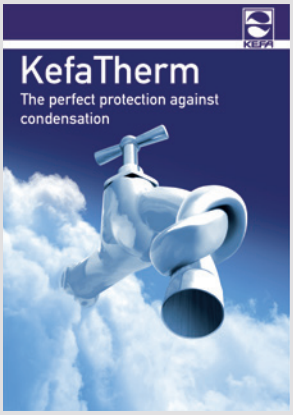


**KefaRid**
**Physical anti-mould prophylaxis**

Protection and restoration coating against mould and bacteria in the interior. The increased surface area distributes moisture and releases it quickly into the ambient air. By doing this, KefaRid creates hygienically impeccable surfaces and improves indoor climate. Organisms don‘t stand a chance because KefaRid is physics that always works.

**KefaTherm Exterieur**
**Permanent make-up for façades**

Dirt, algae, frost damage and weathering on façades? Not with KefaTherm Exterieur. Its special microporous structure regulates rain and condensation on the surface and protects optimally not just against moss and algae but also against water damage and dirt. Durable, effective long-term protection without chemical toxins. KefaTherm Exterieur allows exterior walls to breathe!



**KefaTherm**
**The perfect protection against condensation**

KefaTherm is the best protection against dripping water and consequential damages such as weathering, rot and corrosion. Can be applied on all surfaces, both private and industrial. Its unique microporous structure promotes evaporation and ensures drip-free and dry surfaces. Goods, equipment and buildings remain protected in the long term, while maintenance costs can be reduced significantly.

**Kefa Drainputz**
**The multi-function plaster**

Kefa Drainputz can be used both indoors and outdoors as a draining, insulating, fire resistant plaster for healthy walls. Whether in the kitchen, cellar, façade, for interior insulation or renovation - the microporous structure of Kefa Drainputz regulates moisture in the masonry while preventing mould, moss, water retention, salt efflorescence and much more. A simple and permanent solution.
