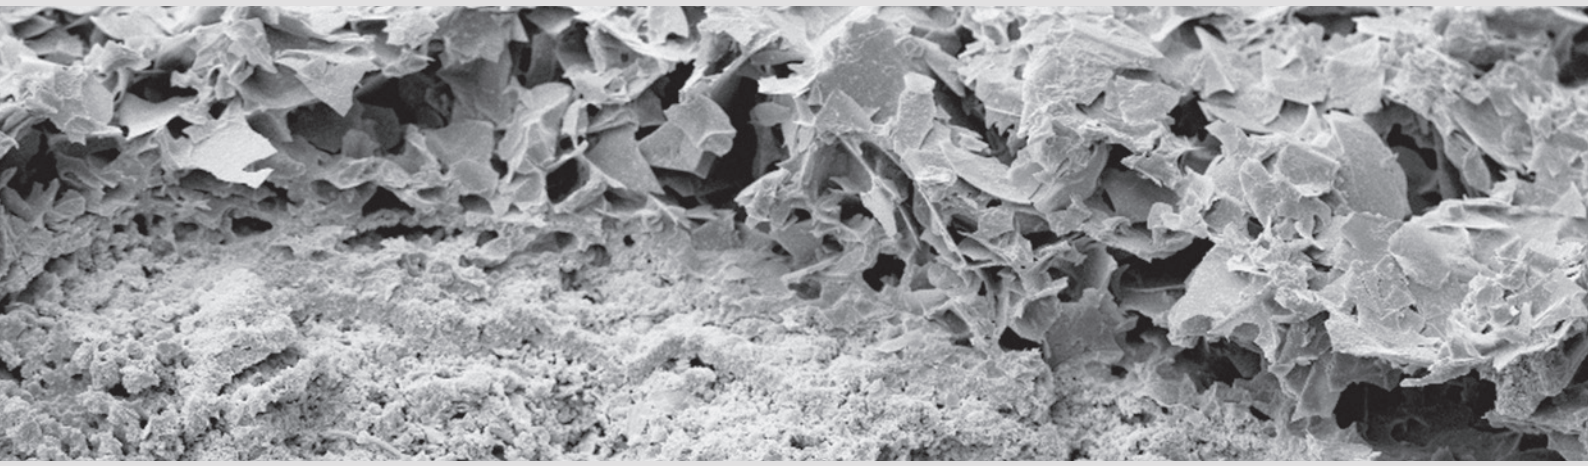
KefaRid

Physical mould prevention

Mould is a serious problem for living rooms, cellars, warehouses and production areas. KefaRid provides the solution – a unique protection and restoration coating against mould and bacteria that always works. Durable, eco-friendly and ingeniously simple. Because KefaRid is physics that works.



High-tech microporous surface of KefaRid

KefaRid – Physical anti-mould prophylaxis

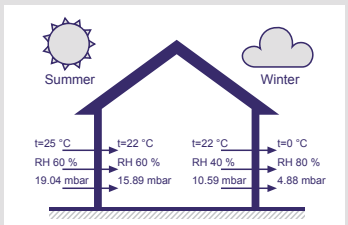
KefaRid eliminates mould permanently

Buildings are protected for years

KefaRid eliminates mould and bacteria from all surfaces in the interior and protects against their occurrence. Its microporous structure regulates moisture and prevents masonry from retaining water. By doing this, KefaRid protects the environment, creates hygienic surfaces, improves the energy balance and keeps walls and ceilings clean for longer.

Processing: KefaRid is a finished product that can be sprayed mechanically or applied by brush/roller, just like paint. The standard colour is white. KefaRid can be tinted with dispersed water-soluble full-tone colours.

Areas of application: Properties, hospitals, breweries, food production and livestock holdings, warehouses, cargo areas, shipping, archives, libraries, and much more.



Moisture dissipation and pressure difference

KefaRid can be tinted

Ingeniously simple – simply ingenious

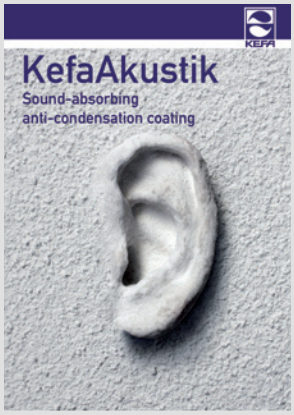
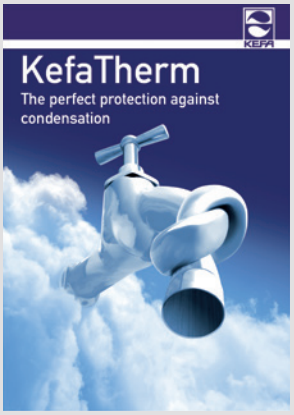
Product overview



KefaAkustik

More peace in your room

KefaAkustik offers a perfectly combined protection against noise pollution and condensation on trapezoidal sheets, roofing, ventilation ducts and many more surfaces. Micropores and mineral elements keep surfaces dry and reduce noise levels effectively. With a minimum of additional weight KefaAkustik provides maximum protection for buildings, goods and hearing.



KefaTherm

The perfect protection against condensation

KefaTherm is the best protection against dripping water and consequential damages such as weathering, rot and corrosion. Can be applied on all surfaces, both private and industrial. Its unique microporous structure promotes evaporation and ensures drip-free and dry surfaces. Goods, equipment and buildings remain protected in the long term, while maintenance costs can be reduced significantly.

KefaTherm Exterieur

Permanent make-up for façades

Dirt, algae, frost damage and weathering on façades? Not with KefaTherm Exterieur. Its special microporous structure regulates rain and condensation on the surface and protects optimally not just against moss and algae but also against water damage and dirt. Durable, effective long-term protection without chemical toxins. KefaTherm Exterieur allows exterior walls to breathe!

Kefa Drainputz

The multi-function plaster

Kefa Drainputz can be used both indoors and outdoors as a draining, insulating, fire resistant plaster for healthy walls. Whether in the kitchen, cellar, façade, for interior insulation or renovation - the microporous structure of Kefa Drainputz regulates moisture in the masonry while preventing mould, moss, water retention, salt efflorescence and much more. A simple and permanent solution.
