

# KefaTherm

## The perfect protection against condensation

There is one sure way to avoid condensation and consequential damages. The unique KefaTherm coating provides for continuously dry, drip-free surfaces and protects optimally against rust, rot and weathering due to condensation. Effective, environmentally friendly and ingeniously simple.

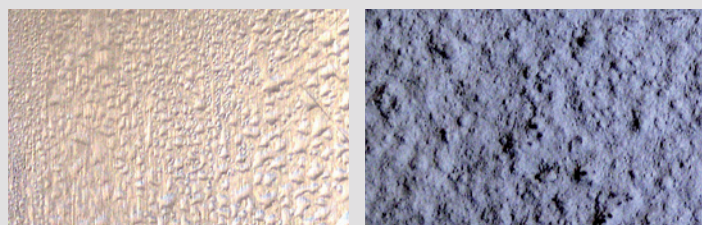

The more material (micropores) there is on the surface, the more condensate it can absorb without dripping.

KefaTherm – Anti-condensation coating

### It closes the tap for dripping water

The special microporous structure of KefaTherm absorbs moisture and spreads it so that it can evaporate quickly. Moreover KefaTherm has heat insulating properties and offers passive protection against corrosion. Goods, equipment and buildings remain protected in the long term, and maintenance costs are reduced significantly.

Condensation on a metal sheet

Surface of KefaTherm

A Bollmann filter system of a pump station

**Application:** KefaTherm is available in industrial quality for coating systems and in airless quality for airless equipment.

Can be used on concrete, metal and wooden structures. The standard colours are white and grey. KefaTherm can be tinted.

**Properties:** It protects against condensation and consequential damages, insulates, is emission-free, offers fire protection and can be used in roofing, containers, garages, etc.

## Ingeniously simple – simply ingenious

# Product overview

## **KefaRid** Physical anti-mould prophylaxis

Protection and restoration coating against mould and bacteria in the interior. The increased surface area distributes moisture and releases it quickly into the ambient air. By doing this, KefaRid creates hygienically impeccable surfaces and improves indoor climate. Organisms don't stand a chance because KefaRid is physics that always works.

## **KefaTherm Exterior** Permanent make-up for façades

Dirt, algae, frost damage and weathering on façades? Not with KefaTherm Exterior. Its special microporous structure regulates rain and condensation on the surface and protects optimally not just against moss and algae but also against water damage and dirt. Durable, effective long-term protection without chemical toxins. KefaTherm Exterior allows exterior walls to breathe!

## **KefaAkustik** More peace in your room

KefaAkustik offers a perfectly combined protection against noise pollution and condensation on trapezoidal sheets, roofing, ventilation ducts and many more surfaces. Micropores and mineral elements keep surfaces dry and reduce noise levels effectively. With a minimum of additional weight KefaAkustik provides maximum protection for buildings, goods and hearing.

## **Kefa Drainputz** The multi-function plaster

Kefa Drainputz can be used both indoors and outdoors as a draining, insulating, fire resistant plaster for healthy walls. Whether in the kitchen, cellar, façade, for interior insulation or renovation - the microporous structure of Kefa Drainputz regulates moisture in the masonry while preventing mould, moss, water retention, salt efflorescence and much more. A simple and permanent solution.
