

# KefaTherm Extérieur

## Permanent make-up for façades

Dirt, algae and weathering on façades? Not with KefaTherm Extérieur. The unique coating allows exterior walls to breathe and offers the perfect protection against growth of moss and algae as well as condensation damage. Permanent, toxin-free and ingeniously simple. Because KefaTherm Extérieur is physics that always works.

The microporous coating prevents condensate accumulation and thus protects against algae and moss formation.

KefaTherm Extérieur – façade protection against algae and moss

Test surface with KefaTherm Extérieur on an insulated façade

### More than just façade paint

The special microporous structure of KefaTherm Extérieur regulates moisture and not only protects against algae and moss, but also prevents damage such as peeling paint, frost damage and water retention. KefaTherm Extérieur also has heat insulating properties and keeps façades clean in the long-term.

**Application:** KefaTherm Extérieur is a finished product for coating all stable surfaces including old coatings and synthetic plasters. The standard colour is white. KefaTherm Extérieur can be tinted.

**Properties:** Self-cleaning effect in rain, protection against condensation and weather damage, emission-free, heat-insulating, weather-resistant and much more.

**Ingeniously simple**  
– simply ingenious

# Product overview

## **KefaRid** Physical anti-mould prophylaxis

Protection and restoration coating against mould and bacteria in the interior. The increased surface area distributes moisture and releases it quickly into the ambient air. By doing this, KefaRid creates hygienically impeccable surfaces and improves indoor climate. Organisms don't stand a chance because KefaRid is physics that always works.

## **KefaAkustik** More peace in your room

KefaAkustik offers a perfectly combined protection against noise pollution and condensation on trapezoidal sheets, roofing, ventilation ducts and many more surfaces. Micropores and mineral elements keep surfaces dry and reduce noise levels effectively. With a minimum of additional weight KefaAkustik provides maximum protection for buildings, goods and hearing.

## **KefaTherm** The perfect protection against condensation

KefaTherm is the best protection against dripping water and consequential damages such as weathering, rot and corrosion. Can be applied on all surfaces, both private and industrial. Its unique microporous structure promotes evaporation and ensures drip-free and dry surfaces. Goods, equipment and buildings remain protected in the long term, while maintenance costs can be reduced significantly.

## **Kefa Drainputz** The multi-function plaster

Kefa Drainputz can be used both indoors and outdoors as a draining, insulating, fire resistant plaster for healthy walls. Whether in the kitchen, cellar, façade, for interior insulation or renovation - the microporous structure of Kefa Drainputz regulates moisture in the masonry while preventing mould, moss, water retention, salt efflorescence and much more. A simple and permanent solution.
